

Motorola Droid Turbo 2 Earpiece Speaker Replacement

Replace your Droid's earpiece speaker to restore full volume during calls.

Written By: Abigail Travis

INTRODUCTION

Follow this guide to replace your Droid's broken earpiece speaker.

TOOLS:

- [iFixit Opening Tools](#) (1)
 - [SIM Card Eject Tool](#) (1)
 - [T6 Torx Screwdriver](#) (1)
 - [T3 Drillbit](#) (1)
 - [Heavy-Duty Spudger](#) (1)
 - [T4 Torx Bit](#) (1)
 - [Precision Tweezers Set](#) (1)
-

Step 1 — Back Cover

- ❗ Power off your phone before you begin working.
- Pop out the SIM card with pointed tweezers or a SIM card eject tool by gently pushing inwards until the tray pops out.

Step 2

- Use the spudger to remove the back cover by gently guiding the spudger around the perimeter of the cover.

Step 3

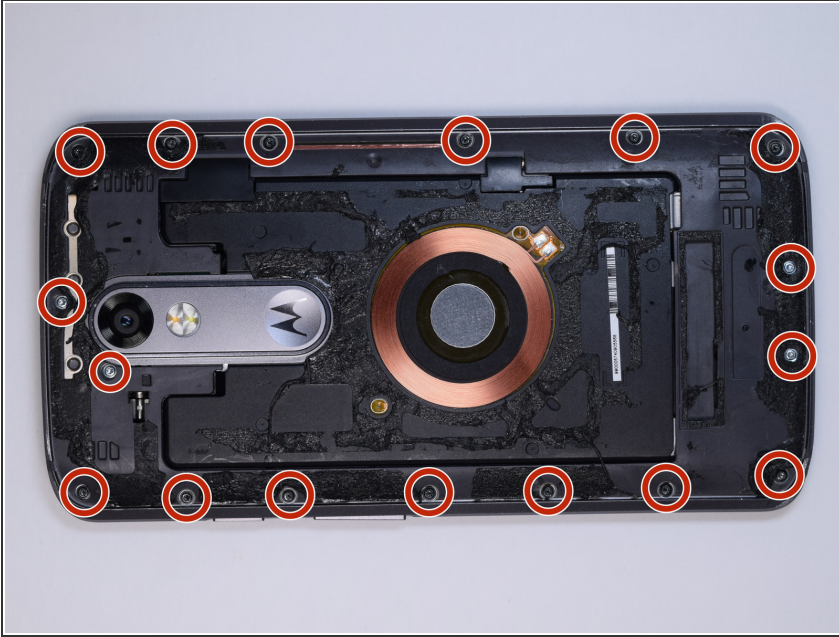

- Use the spudger to gently remove the two plastic covers.

Step 4

- Under the two plastic covers will be two connectors.
- Use a plastic opening tool to pry up the two connectors. These do not completely come off.

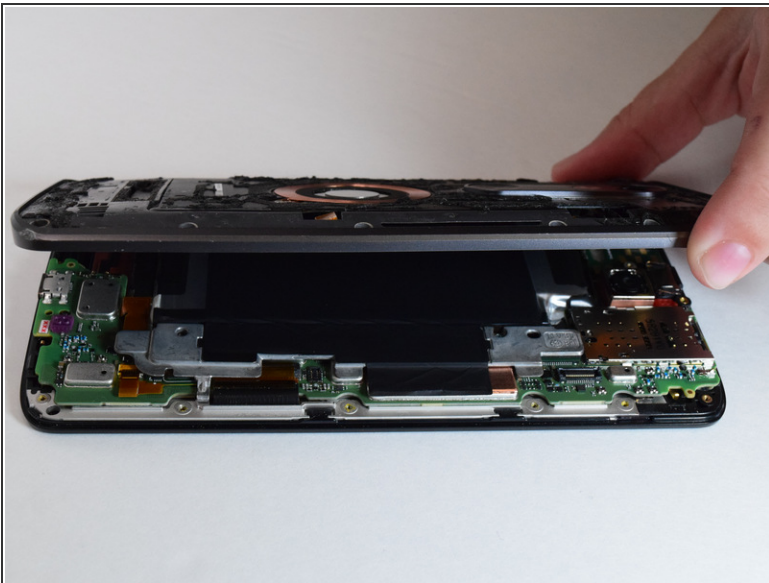

Step 5

- Remove the 17 screws from the board using a T3 bit on your screw driver. Or, use a T4 bit if the screw is slightly stripped.

i The four silver screws on the top and bottom are 4.0mm Phillips #00, and the 13 black screws around the sides are 3.0mm Phillips #00.

Step 6

- Remove the back cover from the phone.

i The volume and power buttons are likely to fall out of the device when removing the back cover. This is normal.

Step 7 — Earpiece Speaker

- Use the plastic opening tool or spudger to delicately pry the earpiece speaker up and remove it from the phone.
- ⓘ Adhesive is holding down the earpiece speaker, so you may have to use gentle force to fully remove the speaker.

To reassemble your device, follow these instructions in reverse order.
